Photographer: Anna Miller – Staff Photographer

Institution: Tufts University

Publication(s): Tufts Medicine (Magazine for Tufts University School of Medicine) – Summer 2018

Description: Front cover and feature story for Tufts Medicine magazine, with a stylized portrait of Bree Aldridge, a leading researcher dedicated to finding a cure for tuberculosis and infectious diseases.

Title: "Taking on TB"

Photographer: Anna Miller – Staff Photographer

Institution: Tufts University

Publication(s): Tufts Medicine (Magazine for Tufts University School of Medicine) – Summer 2018

Description: Front cover and feature story for Tufts Medicine magazine, with a stylized portrait of Bree Aldridge and her team, who are revolutionizing researchers to find a cure for tuberculosis and infectious diseases.

Shomon Shamsuddin, assistant professor of urban and environmental policy and planning, is shown wearing his regalia from the Massachusetts Institute of Technology. "On Commencement Day, when you unzip the case that holds the regalia, it's almost like this treasure that emerges for a brief moment and then you have to wait until next year to wear it again."

Title: "Regale Us"

Photographer: Anna Miller – Staff Photographer

Institution: Tufts University

Publication(s): Tufts Magazine, Tufts Commencement 2017 website, Tufts Instagram and Tufts Facebook

Description: Created the idea to capture a photo essay about personal stories behind commencement fashions. Photographed ten Tufts professors in their academic regalia (using Vermeer's "Girl with the Pearl Earring" as inspiration for composition and quality of light), conducted interviews, and wrote an article and photo captions to accompany the eight-page photo spread in Tufts Magazine. The corresponding #TuftsRegalia engaged an audience of more than 6,690 people in advance of commencement.

Associate Professor of English Modhumita Roy is shown here in her mother's sari and sash, which she wears on Commencement Day. The embroidery pattern is specific to where she grew up in Kolkata, the capital city of the Indian state of West Bengal. Roy, who received her PhD from Stony Brook University, said her regalia reflects both her home country and her time in the States. "It's a nod to both customs," she said.

Title: "Tufts Winter Wonderland"

Photographer: Anna Miller – Staff Photographer

Institution: Tufts University

Publication(s): Tufts Instagram/social media

Description: A wintry campus feature photo, taken during a snowstorm. The photograph was one of the most "liked" photos of the year with more than 2,184 people engaging with the image on Tufts Instagram.

IN A CLOUDY FEBRUARY MORNING in Pownal, Maine, Cara Sammons-Shepard, V16, knelt down on a thick bed of straw and stroked an ultrasound probe across the belly of an Alpine goat named Jolie. The other goats in the shed seemed to bleat encouragement while the farmers, Jodi Bragdon and Jim Niemi, helped hold the patient. Jolie struggled a bit but mostly seemed just curious about what was going on.

Within minutes, Sammons-Shepard was ready with her verdict: Jolie was pregnant.

"Yay!" Bragdon exclaimed.

"Where? Where?" Niemi asked.

"Show me."

The vet pointed to the monitor. "That's your baby right there."

"Ohh..." the farmers said in unison and in wonder.

This was the first time Bragdon and Niemi were breeding their five goats, purchased as a milk supply for Bragdon's soap-making business. Learning that at least two of her does were expecting, Bragdon asked if she should be concerned about roughhousing. Not to worry, Sammons-Shepard told her. "They are goats. They've been head-butting for thousands of years."

Although she cares for animals of many kinds as a traveling veterinarian, Sammons-Shepard is developing a niche: About 80 percent of her farm calls are for goats. These playful, intelligent ruminants led her to become a veterinarian. In doing so, she was following a passion, but also filling a need for farmers.

THIS. U know id be there "studying"

christinekoh @zessig they have smoothies too

ariannaburnham @zessig I can so picture u being like sec???

areback2013 Needed this 25 years ago!!!

sonjahart_ @avramjudah I'm really funny

sonjahart_ @melanienettler the SEC is my local address

akshitarao Wya in the pic!!! @jessie.lan

_oliviang @josephineweidner

emlevitt23 Omg is this forreal????

rosieishername @gluiselli15 srsly???????

spencersemple @katie_semple25 nerd

Publication(s): Tufts social media channels, marketing materials

Description: Students enjoy the brand new Science and Engineering Complex, a building made with energy and environmental design in mind.

Case Solved

HUNTING FOR ANSWERS

When 15-year-old Irish sport horse Laddie stumbled during a pre-Thanksgiving drag hunt (using an artificial fox scent) in 2014, his owner, Anne-Seymour Ellis, figured he'd stepped on a stone and sustained a bruise. But when she went to take him for a ride two days later, Laddie's front right leg was swollen. That winter and spring, Ellis led Laddie through snow and sea along Crane's Beach in Ipswich, Massachusetts, but the swelling and pain remained. "Horses usually splash and splash in the water," she said. "He wasn't even doing that."

An array of tests revealed nothing. So that summer, on the advice of her veterinarian, Ellis brought Laddie to Kirstin Bubeck, a veterinarian at Cummings School's Hospital for Large Animals. With the help of an MRI, Bubeck found that the tendon running from the back of the knee to the hoof was inflamed and that the tissues around the navicular bursa had fused together,

restricting the tendon's movement. "His injury was fairly intense," said Bubeck, one of three specialists board-certified in sports medicine who see patients at Tufts' new Equine Sports Medicine Complex. "He's a tall horse, too, and that can change things because the forces at work are bigger."

After performing an hourlong surgery to divide the tissues and giving an injection of stem cells to help healing, Bubeck ordered daily, gradually lengthening sessions of walking (with no rider), instructions Ellis followed to the letter. At first, she worried that Laddie might not be improving, but soon the horse was trotting and his checkups showed excellent progress.

Two months after the surgery, Ellis was able to ride Laddie again. "I was teary-eyed. I was so relieved he was OK," she said. Today, Laddie is fully recovered. "I think he loves being out and about, exploring, often just the two of us," Ellis said. —MONICA JIMENEZ
