

# Cover stories

Shown on the first page are cover and interior sections of four newsletters: engineering management and systems engineering; chemical and biochemical engineering; mining engineering; and nuclear engineering. Each show how we use different approaches for departments, based on their needs. For example, for EMSE we focused on their anniversary, keeping the building where all grads attended prominent. In others, we focused on an individual researcher, student organization, or program.

# Sample interior stories

Shown here are interior pages from newsletters for the following departments: the electrical and computer engineering; biological sciences; and materials science and engineering. Each are examples of the different types of stories told within the publications: graduate students, alumni and faculty research.
